

Sotiris Kourouklis

Founder & CEO, Orama Network and RootWallet

Athens, Greece. Both founders will relocate to Doha, Qatar on funding.

team@orama.network · [linkedin.com/in/sotiris-kourouklis](https://www.linkedin.com/in/sotiris-kourouklis) · github.com/DeBrosDAO · orama.network · rootwallet.io

Summary

Software architect and platform engineer with eight years of contract work in architecture, distributed systems, cloud infrastructure, CI/CD and delivery for product teams in Germany, the UK, Greece and Dubai. Since January 2025 he has led the design and build of Orama Network, a privacy-first decentralized cloud with its own layer-one blockchain, and RootWallet, a self-custody wallet that also holds passwords, SSH keys and two-factor codes. He co-founded the company with a network and infrastructure engineer he has worked with for seven years.

Role in the company	Founder and CEO. Owns architecture, engineering and product for Orama Network and RootWallet.
Experience	8 years in software architecture and platform engineering, under contract
Education	BSc Computer Science, Hellenic Open University (Grade A) Associate degree in Information Technology, IEK Delta 360 (Grade A+)
Commitment	Full-time on the company. Relocates to Doha on funding.

Orama Network and RootWallet

Founder · January 2025 – present

- Architected and built Orama Network: an API gateway and node software in Go, a distributed SQL database, a distributed cache, encrypted IPFS storage, a WebAssembly serverless engine, real-time messaging, voice and video relays, its own DNS and certificates, and a hardened node operating system.
- Designed the ORAMA layer-one blockchain on Cosmos SDK and CometBFT, with CosmWasm smart contracts and private transactions. It runs on our staging network.
- Built RootWallet for macOS, Linux, iOS, Android and the command line. It is a self-custody wallet for BTC, EVM chains and Solana, plus an encrypted vault for passwords, SSH keys and two-factor codes, all from one recovery phrase. A local agent lets developer tools and AI agents request signatures with human approval.
- Wrote about 2,960 of the 3,050 commits in the two main repositories, with no outside funding.
- Orama already runs a third-party production app: AnChat (anchat.io), an encrypted messenger whose whole backend runs on Orama and which uses RootWallet login.

Experience

Software Architect & Platform Engineer · WEB33 L.P.

January 2023 – present · Athens, Greece (hybrid)

Owns architecture, Kubernetes and cloud infrastructure, CI/CD, and technical planning and delivery for client engagements, from the business requirement through to production.

Software Architect & Platform Engineer · Renfluence P.C.

January 2024 – August 2024 · Contract, remote

Architected and delivered an influencer campaign platform from scratch, including the TikTok integration. The platform runs five- and six-figure campaigns.

Selected earlier work

- Built a multi-tenant platform from scratch that provisioned infrastructure automatically for each customer. The business was later acquired.
- Architected an agentic-AI platform for regulated finance and insurance.

Projects

PokeTrade.ai

February 2026 – present

A trading marketplace for Pokémon cards, released on the App Store and Google Play. Collectors scan a card with the camera, and the app identifies it and suggests a price.

BugBoard.ai

January 2025 – present

Issue tracking and project management for engineering teams, built so the backlog works for people and for coding agents. Teams update tickets from their editor through MCP.

Education

Bachelor's degree, Computer Science · Hellenic Open University

September 2020 – July 2024 · Grade A

School of Science and Technology. 240 ECTS, completed in the minimum four years.

Associate degree, Information Technology · IEK Delta 360

January 2020 – June 2022 · Grade A+

Computer Software Technician, a Level 5 qualification in software development.

Skills

Software architecture · Platform architecture · Distributed systems · Cloud infrastructure and Kubernetes · CI/CD · Blockchain (Cosmos SDK) · Applied cryptography and security · Go, TypeScript, Rust · Mobile and desktop apps (React Native, Tauri)
